ijsra —

bibLATEX-style of the journal *International Journal of Student Research in Archaeology*

Lukas C. Bossert

Version: 0.1 (2016-07-04)

Abstract

Bibliographical style called ijsra which is done for the journal *International Journal of Student Research in Archaeology* (IJRSA).

1 Usage

The name of the bibLATEX-style is ijsra has to be activated in the preamble.

\usepackage[style=ijsra]{biblatex}
\bibliography{bib-file.bib}

At the end of your document you can write the command \printbibliography to print the bibliography. Further information are found below (section 3).

2 Overview

As always citing is done with \cite:

\cite[[prenote]][[postnote]][[bibtex-key]]

\cite{[prenote]}[[postnote]][[bibtex-key]]

\cite[[postnote]][[bibtex-key]]

The \langle bibtex-key\rangle corresponds to the key from the bibliography file.

\cites
If one wants to cite several authors or works a very convenient way is the following using the \cites-command:

\cites

*The development of the code is done at [https://github.com/LukasCBossert/biblatex-ijsra](https://github.com/LukasCBossert/biblatex-ijsra).  

lukas@digitales-altertum.de
Sometimes a citation has to be put in parentheses. Therefore we implemented the command `\parencite`:

\parencite{(post-note)}{(bibtex-key)}

This cite command takes care of the correct corresponding parentheses and brackets. Especially in @Insection citations the parentheses are changing to (square) brackets.

Of course there is also the possibility to cite several authors/works in parentheses. This is done with `\parencites`:

\parencites{(pre-prenote)(post-postnote)}{(bibtex-key)}

Beside the listed \cite commands above there is a third way of citing: `\textcite` is useful if the author should be mentioned in the text and the remaining components such as year and page will immediately follow in parentheses.

\textcite{(post-note)}{(bibtex-key)}

And again there is also a `\textcites` in case of several authors:

\textcites{(pre-prenote)(post-postnote)}{(bibtex-key)}

Furthermore and additionally to the ›normal‹ `\cite`-commands one can also cite only the author or the work title in the text and in the footnotes.

\citeauthor{(pre-name)}{(post-name)}{(bibtex-key)}

\citetitle{(pre-name)}{(post-name)}{(bibtex-key)}

and for the works

\cites{(pre-name)}{(post-name)}{(bibtex-key)}

3 Bibliography

But first we define the heading of the whole bibliography:

\printbibheading{%
heading=bibliography,%
%heading=bibnumbered,% if you want it numbered
%title={Bibliography}}%heading for bibliography

You can give any title you would like to give (title = \{\(any\ title\}\}).

Finally the bibliography:
\printbibliography [%
heading=subbibliography,
%heading=subbibliography, if you want it numbered
\title={Secondary literature}]
