1. Introduction

Two classfiles namely `cas-sc.cls` and `cas-dc.cls` were written for typesetting articles submitted in journals of Elsevier’s Complex Article Service (CAS) workflow.

1.1. Usage

1. `cas-sc.cls` for single column journals.

\documentclass[<options>]{cas-sc}

2. `cas-dc.cls` for single column journals.

\documentclass[<options>]{cas-dc}

and have an option `longmktitl`e to handle long front matter.

2. Front matter

\title[mode = title]{This is a specimen \$a_b$ title}
\tnotemark[1,2]

\tnotetext[1]{This document is the results of the research project funded by the National Science Foundation.}

\tnotetext[2]{The second title footnote which is a longer text matter to fill through the whole text width and overflow into another line in the footnotes area of the first page.}

ABSTRACT

This template helps you to create a properly formatted $\LaTeX$ manuscript.\beginabstract\ldots\endabstract and\beginkeyword\ldots\endkeyword which contain the abstract and keywords respectively. Each keyword shall be separated by a \sep command.

1. Introduction

The Elsevier cas-sc class is based on the standard article class and supports almost all of the functionality of that class. In addition, it features commands and options to format the

- document style
- baselineskip
- front matter
- keywords and MSC codes
- theorems, definitions and proofs
- lables of enumerations
- citation style and labeling.

This class depends on the following packages for its proper functioning:

1. natbib.sty for citation processing;
2. geometry.sty for margin settings;
3. fleqn.clo for left aligned equations;
4. graphicx.sty for graphics inclusion;
5. hyperref.sty optional packages if hyperlinking is required in the document;

All the above packages are part of any standard $\LaTeX$ installation. Therefore, the users need not be bothered about downloading any extra packages.

\begin{itemize}
\item This document is the results of the research project funded by the National Science Foundation.
\item The second title footnote which is a longer text matter to fill through the whole text width and overflow into another line in the footnotes area of the first page.
\item This note has no numbers. In this work we demonstrate \begin{itemize}
\item the formation $Y_1$ of a new type of polariton on the interface between a cuprous oxide slab and a polystyrene micro-sphere placed on the slab.
\end{itemize}
\item Corresponding author
\item Principal corresponding author
\item cvr_1@tug.org.in (C. Radhakrishnan); cvr3@sayahna.org (C. Rajagopal); rishi@stmdocs.in (R. T.)
\item www.cvr.cc,cvr@sayahna.org (C. Radhakrishnan); www.sayahna.org (C. Rajagopal); www.stmdocs.in (R. T.)
\item orcid(s): 0000-0001-7511-2910 (C. Radhakrishnan)
\item 1This is the first author footnote. but is common to third author as well.
\item 2Another author footnote, this is a very long footnote and it should be a really long footnote. But this footnote is not yet sufficiently long enough to make two lines of footnote text.
\end{itemize}

\end{abstract}

1. Introduction

The Elsevier cas-dc class is based on the standard article class and supports almost all of the functionality of that class. In addition, it features commands and options to further control graphic.

- document style
- baselineskip
- front matter
- keywords and MSC codes
- theorems, definitions and proofs
- lables of enumerations
- citation style and labeling.

This class depends on the following packages for its proper functioning:

1. natbib.sty for citation processing;
2. geometry.sty for margin settings;
3. fleqn.clo for left aligned equations;
4. graphicx.sty for graphics inclusion;
5. hyperref.sty optional packages if hyperlinking is required in the document;

All the above packages are part of any standard \LaTeX\ installation. Therefore, the users need not be bothered about downloading any extra packages.

2. Installation

The Elsevier cas-dc class is based on the standard article class and supports almost all of the functionality of that class. In addition, it features commands and options to further control graphic.

3. Front matter

The Elsevier cas-dc class is based on the standard article class and supports almost all of the functionality of that class. In addition, it features commands and options to further control graphic.

4. Bibliography styles

There are various bibliography styles available. You can select the style of your choice in the preamble of this document. These styles are Elsevier styles based on standard styles like Harvard and Vancouver. Please use Bib\LaTeX\ to generate your bibliography and include DOIs whenever available.

Here are two sample references: [7] [7, 8] [7, 9]

5. Floats

Figures may be included using the command, \includegraphics in combination with or without its several options to further control graphic. \includegraphics

Rawat et al.: Preprint submitted to Elsevier

Clip 2: Double column output (classfile: cas-dc.cls).
2.2. Author

\author command have the below options:

1. auid: Author id
2. bioid: Biography id
3. alt: Alternate author
4. style: Style of author name chinese
5. prefix: Prefix Sir
6. suffix: Suffix
7. degree: Degree
8. role: Role
9. orcid: ORCID
10. collab: Collaboration
11. anon: Anonymous author
12. deceased: Deceased author
13. twitter: Twitter account
14. facebook: Facebook account
15. linkedin: LinkedIn account
16. plus: Google plus account
17. gplus: Google plus account

\author[1,3]{Author Name}[type=editor, 
auid=000, bioid=1, 
prefix=Sir, 
role=Researcher, 
orcid=0000-0001-7511-2910, 
facebook=<facebook id>, 
twitter=<twitter id>, 
linkedin=<linkedin id>, 
gplus=<gplus id>]}
2.3. Various Marks in the Front Matter

The front matter becomes complicated due to various kinds of notes and marks to the title and author names. Marks in the title will be denoted by a star (⋆) mark; footnotes are denoted by super scripted Arabic numerals, corresponding author by of an Conformal asterisk (*) mark.

2.3.1. Title marks

Title mark can be entered by the command, \texttt{\notemark[<num>]} and the corresponding text can be entered with the command \texttt{\notetext[<num>]{<text>}}. An example will be:

\begin{verbatim}
\title[mode=title]{Leveraging social media news to predict stock index movement using RNN-boost}
\notemark[1,2]
\notetext[1]{This document is the results of the research project funded by the National Science Foundation.}
\notetext[2]{The second title footnote which is a longer text matter to fill through the whole text width and overflow into another line in the footnotes area of the first page.}
\end{verbatim}

\texttt{\notetext} and \texttt{\notemark} can be anywhere in the front matter, but shall be before \texttt{\maketitle} command.

2.3.2. Author marks

Author names can have many kinds of marks and notes:

- footnote mark : \texttt{\fnmark[<num>]}
- footnote text : \texttt{\fntext[<num>]{<text>}}
- affiliation mark : \texttt{\author[<num>]{}}
- email : \texttt{\ead{<emailid>}}
- url : \texttt{\ead[url]{<url>}}
- corresponding author mark : \texttt{\cormark[<num>]}
- corresponding author text : \texttt{\cortext[<num>]{<text>}}

2.3.3. Other marks

At times, authors want footnotes which leave no marks in the author names. The note text shall be listed as part of the front matter notes. Class files provides \texttt{\nonumnote} for this purpose. The usage
\nonumnote{<text>}

and should be entered anywhere before the \maketitle command for this to take effect.

2.4. Abstract and Keywords

Abstract shall be entered in an environment that starts with \begin{abstract} and ends with \end{abstract}. Longer abstracts spanning more than one page is also possible in Class file even in double column mode. We need to invoke longmkttitle option in the class loading line for this to happen smoothly.

The key words are enclosed in a \{keyword\} environment.

\begin{abstract}
This is a abstract. \lipsum[3]
\end{abstract}

\begin{keywords}
First keyword \sep Second keyword \sep Third keyword \sep Fourth keyword
\end{keywords}

3. Main Matter

3.1. Tables

3.1.1. Normal tables

\begin{table}
\caption{This is a test caption.}
\begin{tabular*}{\tblwidth}{@{} LLLL@{}}
\toprule
Col 1 & Col 2 \\
\midrule
12345 & 12345 \\
12345 & 12345 \\
12345 & 12345 \\
\bottomrule
\end{tabular*}
\end{table}
3.1.2. Span tables

\begin{table*}[width=.9\textwidth,cols=4,pos=h]
\caption{This is a test caption.}
\begin{tabular*}{\tblwidth}{@{} LLLLLL@{} }
\toprule
Col 1 & Col 2 & Col 3 & Col4 & Col5 & Col6 & Col7 \\
\midrule
12345 & 12345 & 123 & 12345 & 123 & 12345 & 123 \\
12345 & 12345 & 123 & 12345 & 123 & 12345 & 123 \\
12345 & 12345 & 123 & 12345 & 123 & 12345 & 123 \\
\bottomrule
\end{tabular*}
\end{table*}

3.2. Figures

3.2.1. Normal figures

\begin{figure}
\centering
\includegraphics[width=.75\textwidth]{Fig1.pdf}
\caption{The evanescent light - $1S$ quadrupole coupling ($g_{(1,1)}$) scaled to the bulk exciton-photon coupling ($g_{(1,2)}$). The size parameter $kr_0$ is denoted as $x$ and the PMS is placed directly on the cuprous oxide sample ($\delta r=0$, See also Fig. \protect\ref{FIG:2}).}
\label{FIG:1}
\end{figure}

3.2.2. Span figures

\begin{figure*}
\centering
\includegraphics[width=.75\textwidth]{Fig2.pdf}
\caption{Schematic of formation of the evanescent polariton on linear chain of PMS. The actual dispersion is determined by the ratio of two coupling parameters such as exciton-WGM coupling and WGM-WGM coupling between the microspheres.}
\label{FIG:2}
\end{figure*}
3.3. Theorem and theorem like environments

CAS class file provides a few hooks to format theorems and theorem like environments with ease. All commands the options that are used with \newtheorem command will work exactly in the same manner. Class file provides three commands to format theorem or theorem like environments:

1. \newtheorem command formats a theorem in \LaTeX's default style with italicized font for theorem statement, bold weight for theorem heading and theorem number typeset at the right of theorem heading. It also optionally accepts an argument which will be printed as an extra heading in parentheses. Here is an example coding and output:

\begin{verbatim}
\newtheorem{theorem}{Theorem}
\begin{theorem}\label{thm}
The WGM evanescent field penetration depth into the cuprous oxide adjacent crystal is much larger than the QE radius:
\begin{equation*}
\lambda_{1S}/2 \pi \left({\epsilon_{Cu2O}-1}\right)^{1/2} = 414 \mbox{ \AA} \gg a_B = 4.6 \mbox{ \AA}
\end{equation*}
\end{theorem}
\end{verbatim}

2. \newdefinition command does exactly the same thing as with except that the body font is up-shape instead of italic. See the example below:

\begin{verbatim}
\newdefinition{definition}{Definition}
\begin{definition}
The bulk and evanescent polaritons in cuprous oxide are formed through the quadrupole part of the light-matter interaction:
\begin{equation*}
H_{\text{int}} = \frac{i e }{m \omega_{1S}} \mathbf{E}_{i,s} \cdot \mathbf{p}
\end{equation*}
\end{definition}
\end{verbatim}
3. \newproof command helps to define proof and custom proof environments without counters as provided in the example code. Given below is an example of proof of theorem kind.

\newproof{pot}{Proof of Theorem \ref{thm}}
\begin{pot}
The photon part of the polariton trapped inside the PMS moves as it would move in a micro-cavity of the effective modal volume $V \frac{4 \pi r_0^3}{3}$. Consequently, it can escape through the evanescent field. This evanescent field essentially has a quantum origin and is due to tunneling through the potential caused by dielectric mismatch on the PMS surface. Therefore, we define the \emph{evanescent} polariton (\EP) as an evanescent light-QE coherent superposition.
\end{pot}

3.4. Enumerated and Itemized Lists

CAS class files provides an extended list processing macros which makes the usage a bit more user friendly than the default LaTeX list macros. With an optional argument to the \begin{enumerate} command, you can change the list counter type and its attributes. You can see the coding and typeset copy.

\begin{enumerate}[1.]
\item The enumerate environment starts with an optional argument ‘1.’ so that the item counter will be suffixed by a period as in the optional argument.
\item If you provide a closing parenthesis to the number in the optional argument, the output will have closing parenthesis for all the item counters.
\item You can use ‘(a)’ for alphabetical counter and ‘(i)’ for roman counter.
\begin{enumerate}[a)]
\item Another level of list with alphabetical counter.
\item One more item before we start another.
\end{enumerate}
\item This item has roman numeral counter.
\end{enumerate}
\item Another one before we close the third level.
\end{enumerate}
\item Third item in second level.
\end{enumerate}
\item All list items conclude with this step.
\end{enumerate}

\section{Biography}
\verb+\bio+ command have the below options:
\begin{enumerate}
\item \verb+width:+ Width of the author photo (default is 1in).
\item \verb+pos:+ Position of author photo.
\end{enumerate}

\begin{vquote}
\bio[width=10mm,pos=l]{tuglogo.jpg}
\textbf{Another Biography:}
Recent experimental \cite{HARA:2005} and theoretical \cite{DEYCH:2006} studies have shown that the \WGM can travel along the chain as "heavy photons". Therefore the \WGM acquires the spatial dispersion, and the evanescent quadrupole polariton has the form (See Fig.\ref{FIG:3}):
\endbio

4. CRediT authorship contribution statement

Give the authorship contribution after each author as
\begin{quote}
\texttt{\credit{Conceptualization of this study, Methodology, Software}}
\end{quote}

To print the details use \texttt{\printcredits}

\author[1,3]{V. \={A}nand Rawat}[auid=000,
bioid=1,

\printcredits

5. Bibliography

For CAS categories, two reference models are recommended. They are model1-num-names.bst and model2-names.bst. Former will format the reference list and their citations according to numbered scheme whereas the latter will format according name-date or author-year style. Authors are requested to choose any one of these according to the journal style. You may download these from

The above bsts are available in the following location for you to download:

□
