The \texttt{varwidth} package (version 0.92)

Donald Arseneau*

September 26, 2011

\section{The \texttt{varwidth} environment}

The package defines a \texttt{varwidth} environment (based on \texttt{minipage}) which is an analogue of \texttt{minipage}, but whose resulting width is the natural width of its contents. A trivial example:

\begin{verbatim}
\begin{varwidth}{1in} Trivia \end{varwidth} and \begin{minipage}{1in} Trivia \end{minipage}
\end{verbatim}

which produces

Trivia and Trivia

(the output placed in an \texttt{fbox} to emphasise the effect).

\section{The \texttt{narrowragged} command}

The command works like \texttt{raggedright}, but produces generally narrower lines in paragraphs, with more text in the last line (the lines have more-equal lengths).
